NOTICE

SAFETY NOTICE: PLEASE CAREFULLY READ AND STRICTLY FOLLOW ALL THE SAFETY WARNINGS AND NOTICES BELOW ALL THE TIME.

Note: Each 3D printer undergoes printing tests before leaving the factory. Filament residue on the nozzle or slight scratches on the build plate are normal and do not affect usage.

WORK ENVIRONMENT SAFETY

- ◆ Please keep the workspace clean and tidy.
- ◆ Please ensure the equipment operates away from combustible gases, liquids, and dust. High temperatures generated during operation may react with combustible gases, liquids, or airborne dust, potentially causing fires.
- ◆ Children and untrained individuals should not operate the equipment alone.

ELECTRICAL SAFETY

- ◆ Please properly ground the equipment. Do not modify the plug. Ungrounded equipment/improperly grounded equipment/modified plug will inevitably increase the risk of electric leakage.
- ◆ Avoid exposing the equipment to damp or direct sunlight environments. Humidity will increase the risk of electric leakage. Exposure to sunlight will accelerate the aging of plastic parts.
- ◆ Make sure to only use the power cord provided by Flashforge.
- ◆ Do not use the equipment during thunderstorms.
- ◆ Please turn off the equipment and unplug it if it is not in use for a long time.

PERSONAL SAFETY

- ◆ Do not touch the extruder, build plate, etc., during printing.
- ◆ Do not touch the extruder and build plate after finishing printing to avoid high temperature burns or mechanical damage.
- ◆ Do not wear scarves, masks, gloves, jewelry, or other objects that can easily get tangled into the equipment while operating it.
- ◆ Do not operate the equipment while you are tired or under the influence of drugs, alcohol or medication.

CAUTIONS

- ◆ Keep the inside of the equipment clean. Do not drop metal objects into the grooves at the bottom of the build plate.
- ◆ Please clean up filament debris in time. It is recommended to operate this outside the equipment.
- ◆ Any modification of the equipment by yourself will void the warranty.
- ◆ Please keep the distance between the extruder and build plate for at least 50mm during filament loading. Too-close distance may cause nozzle clogs.
- ◆ Please operate the equipment in a well-ventilated environment.
- ◆ Do not use the equipment for illegal activities.
- ◆ Do not use the equipment to make food storage containers.
- ◆ Do not place printed models into your mouth.

EQUIPMENT ENVIRONMENT REQUIREMENTS

- ◆ Room temperature: 15-30°C; Humidity: 20-70RH%

EQUIPMENT PLACEMENT REQUIREMENTS

- ◆ The equipment must be placed in a dry and well-ventilated environment. A distance of at least 20cm must be reserved around the front, back, left and right sides of the equipment. Recommended storage temperature: 0-40°C

COMPATIBLE FILAMENT REQUIREMENTS

- ◆ When using this equipment, it's recommended to use Flashforge's filaments. If non-Flashforge filaments are used, there will be certain differences in material properties, and print parameters may need adjustments.

Slicing Software Instructions for Adventurer 5M Series

Note

Before reading the brief instructions, please ensure you have reviewed the Quick Start Guide and completed the first print.

Before printing 3D model files, you need to configure slicing presets for the corresponding printer. Recommended slicing software: **Orca-Flashforge / OrcaSlicer**.

Pre-printing Steps:

Orca-Flashforge

* The steps are illustrated for one machine type.

Orca-Flashforge is a slicing software developed based on OrcaSlicer, with custom features tailored for the Adventurer 5M series.

Download Instructions:

1. Download the latest slicing software from: <https://www.flashforge.com/download-center>.
2. Find the Orca-Flashforge's installation package on the USB flash drive and install the version that matches your system.

1. Open the installed Orca-Flashforge.

2. Setup Wizard:

Follow the setup wizard prompts for selecting your region, machine type, and materials.

(Note: You can select all machine types and material types in the list for later slicing options.)

3. Account Login/Register:

Log in to Orca-Flashforge using your Flashforge account. If you don't have an account, register one using your mobile phone number. (Note: Flash Maker and Orca-Flashforge share the same account.)

4. Create or open a project for slicing. You can

select the machine type, material, and recommended parameters in the printer, filament, and process bars.

5. After slicing, select the printer and send for printing.

6. You can remotely monitor the printing progress and pause/stop printing when necessary on the device interface. (Note: Real-time monitoring is only available with a camera installed and activated.)

OrcaSlicer Download Instructions:

4. Printing

4.1 Filament Loading and Changing

4.1.1 Filament Loading

Click [] to enter the filament loading interface and follow on-screen instructions to complete filament loading.

4.1.2 Filament Changing

1. Click [] - [], and follow on-screen instructions to complete filament changing.

2. Pull out the filament guide tube as shown, and cut the filament.

3. Pull out the cut filament, and insert the new filament into the filament guide tube. If the material type is changed, click [PLA] to select the corresponding material type.

4. Click [Start], wait for the extruder to heat up and filament feeding will begin. When you see the previous filament is extruded, insert the new filament and observe its flow and the extrusion. If the new filament smoothly comes out of the nozzle, the filament change is successful. If not, hold the filament by hand, insert it into the inlet, and click [Again] to retry. Feel for filament movement until it is extruded. After successful loading, insert the filament guide tube into the inlet.

Note

1. If the previous filament roll is completely used up and there is no filament in the guide tube, you can proceed with the loading process directly.
2. When changing filament, try to clear out the old filament using the new filament.
3. You can click [?] to view the nozzle usage guide on the screen.

4.2 Network Connection

Click [🔧] - [📶] to enter the network connection interface.

4.2.1 Wireless Network Connection

Turn on the Wi-Fi switch, and tap to connect to the corresponding wireless network. Once connected successfully, the network will be marked, and an [📶] icon will appear at the top right corner of the screen.

4.2.2 Wired Network Connection

1. Select [Ethernet] and plug the network cable into the Ethernet port on the back of the printer following on-screen instructions.
2. Once connected successfully, it will display as [Connected], and an [🖨️] icon will appear at the top right corner of the screen.

4.3 Printing Methods

4.3.1 Printing via USB

The printer supports printing via USB. Save the sliced file to a USB flash drive, insert it into the printer, and select the corresponding file to start printing.

4.3.2 Printing via Wi-Fi transfer

After successfully connecting the printer to the network, open Orca-Flashforge. After finishing slicing, click [Print plate] in the menu, and select the connected Adventurer 5M to send the print job.

Note

The printer and the computer must be connected to the same network. There are two modes for printer connection: WAN Mode and LAN Only Mode.

After logging in, click the icon at the top right corner, click [Settings], and click [PIN Code] in the menu to find the PIN code.

After connecting the Adventurer 5M to the network, simply turn on the Polar Cloud switch and enter your account and PIN code.

4.4 Model Removal After Printing

Note

When printing is completed, the nozzle and build plate may still be at a high temperature. It is recommended to allow them to cool down before removing the model.

After printing is completed, directly take out the flexible steel plate and bend the platform to remove the model. Ensure there is no residual filament on the platform before the next print.

Tips on Model Removal:

1. Please take the platform plate outside the printer for model removal to prevent model debris from accumulating inside the printer. It's recommended to keep the chamber clean.
2. For models printed with TPU or other flexible materials, it is recommended to use a scraper for removal, which ensures you can remove the flexible model from the bed without causing damage.

5. Introduction to Auxiliary Functions

Note

The interface layout may change whenever there is an upgrade of firmware.

5.1 Leveling and Calibration

During the first startup, equipment calibration will be performed. During subsequent use, choose leveling or vibration compensation as needed.

When to perform leveling:

- ◆ If continuously printing with PLA material, perform automatic leveling once with no need to do so before each print. However, performing leveling can inevitably improve the printing success rate;
- ◆ When switching between different materials (e.g., from PLA to ABS), please perform leveling before each print;
- ◆ If the platform-nozzle distance is too far (poor adhesion) or too close (no filament extrusion), please perform automatic leveling;
- ◆ After replacing the build plate or nozzle, please perform automatic leveling.

When to perform vibration compensation:

- ◆ When there is noticeable ghosting and ringing on 3D prints;
- ◆ After adjusting the tension of the synchronous belt;
- ◆ When the printer has been unused for a long time and is now being restarted.

Instructions:

Click [] - [] to enter the leveling and calibration interface. Choose [Leveling] or [Vibration test], click [Start], and the printer will automatically perform the corresponding operation. (Note: Before calibration, ensure there are no foreign objects on the platform or at the nozzle tip.)

Note on when to perform PID calibration: This can be performed after replacing the nozzle or when the nozzle temperature is abnormal.

5.2 Other Function Settings

In the information interface, you can enable or disable sound and filament detection, and perform firmware updates.

- ◆ When [Filament detect] is enabled, the printer will stop printing if filament runs out mid-print.
- ◆ When connected to a wireless network, click [Firmware update] to view the current version, check for updates, and perform online firmware updates.
- ◆ Printer Name and Location: Users can customize the name and location as desired.

6. Maintenance

6.1 Suggestions on Platform Plate Usage

1. Powder coated PEI plate requires glue and is suitable for printing PLA/PETG/PLA-CF/PETG-CF/ABS/ASA. TPU printing does not require glue. This plate comes with the printer.
2. PEI film plate is suitable for printing PLA/TPU without glue. For PETG, it's recommended to use glue. This plate can be purchased separately.
3. PC sticker platform plate is suitable for printing PC/ABS/ASA. This plate can be purchased separately.
4. After applying glue to the platform plate, it can be cleaned with water.
5. If the platform plate gets oily, it can be cleaned with a dish detergent.
6. If the platform plate deforms significantly after long-term use, it's recommended to replace it with a new one.

6.2 Suggestions on Nozzle Usage

1. Please use one nozzle for the same type of material to avoid clogs and extend nozzle lifespan, especially when working with fiber-reinforced materials and PETG. Please avoid mixing them with other materials.
2. When switching to a different material with the same nozzle, if the new material's printing temperature is lower, adjust the setting to a higher temperature for filament extrusion to purge old filament from the nozzle.
3. When switching to a different material with a higher printing temperature, just load the new filament.
4. To clean residual filament inside the nozzle, you can perform multiple filament loading or manually clear any remaining filament using the unclogging pin tool.
5. After replacing the nozzle, please perform leveling again.

6.3 General Maintenance

1. Please apply lubricating oil to the guide rails after 200 hours of printing.
2. Please replace the filter cotton every 300 hours of printing or when it appears darker in color.
3. Please clean the filament residue inside the equipment chamber in time.

7. Q&A

Q1. How to unlog the nozzle?

Method 1: Click [Load] and heat the nozzle to the printing temperature of the used filament. After heating, remove the filament guide tube, and check if the filament is bent or filament tip is not smooth. If so, trim and insert the guide tube and filament into the nozzle, then click [Load] and check.

Method 2: If Method 1 doesn't work, use the unlogging pin tool.

Method 3: If Method 2 doesn't work, please replace the nozzle.

Q2. How to replace the nozzle?

Note Please power off the printer before replacing the nozzle!

1. Remove the filament guide tube and cut the filament.

2. Press the left and right buckles and remove the nozzle. Trim the filament along the nozzle top.

3. Insert the new nozzle into the extruder and you can hear a "click" sound indicating the buckle position has changed. Ensure that the nozzle slot aligns flush with the bottom of the extruder. Note: If you have trouble aligning the nozzle, you can press the buckles during installation or remove the front cover of the extruder (grab the lower part of the front cover with your hand and lift it upward slightly) to check the position.

Whether it is installed in place is judged as follows:

1. Ensure the nozzle is pressed to the bottom firmly during installation.
2. Check if it is properly installed:
 - a. Check the red buckle positions on the left and right.

- b. Check if the nozzle slot is flush with the bottom of the extruder (if your view is obstructed, you can remove the front cover of the extruder to observe).

4. Power up the printer, click [] to enter the loading interface, and follow the on-screen instructions to complete filament loading (refer to 4.1.1). Filament coming out of the new nozzle smoothly indicates a successful nozzle replacement.

Q3. Is leveling required after nozzle replacement?

Yes. It is recommended to perform automatic leveling to ensure high print quality as slight errors may occur during nozzle installation. The equipment defaults to the leveling operation before each print.

Q4. What to do if the extruder moves but doesn't extrude filament at the beginning of printing after clicking the model for printing?

1. Observe the filament guide tube to check if filament has entered the nozzle. If not, please click [Load] until filament comes out.
2. Check if the nozzle is clogged. If so, please refer to the solution of Q1.

Q5. What to do if the nozzle position is too high (far from the platform) or too low (hitting the platform) during printing? How to level it?

Please check if the platform is properly installed and there is no excessive residue on the nozzle. If these issues exist, address them first. Then, go to the settings interface, select the leveling option, and perform automatic leveling or enable automatic leveling before printing.

Q6. Can filaments from other brands be used?

Yes. You can use filaments from other brands, but certain parameter adjustments are required due to slight temperature differences in different filaments.

Q7. Is it safe to print with ABS material?

ABS can release toxic gases during heating. If conditions permit, consider printing in a well-ventilated area. It is recommended to print non-toxic materials such as PLA in children's activity places.

Q8. What to do if the printed model warps or doesn't adhere well?

Method 1: Increasing the platform temperature can improve the adhesion between the platform and the model.

Method 2: Adding a brim during model slicing can alleviate the issue.

Method 3: Apply glue.

Method 4: Clean the platform to remove any oil or dirt.

Method 5: Check if the platform is level. The leveling and calibration function can be used.

Q9. What to do if print files can not be found and the screen displays only folders after inserting the USB flash drive?

The USB flash drive format is incorrect. The printer supports the FAT32 file system. Please format the USB flash drive to FAT32.

Q10. What to do with the Wi-Fi connection failure?

1. Please check if the Wi-Fi name contains special characters. If so, modify it and try again.
2. Please check if the password contains special characters. If so, modify it and try again.

Q11. Firmware update precaution

Do not power off the printer or disconnect from the network during firmware download or update to prevent update failures.

Q12. Why is the boot screen white?

If the startup sound can be heard, please replace the screen or cable. If not, please contact our after-sales personnel.

8. Help and Support

Flashforge's professional after-sales service personnel and salesmen are on standby for you at any time and are ready to help you with any problem you may have with the printer. If the issues or questions are not covered in this User Guide, you can seek for solutions on our official website or contact us by phone.

4.4 打印后模型移除

⚠ 注意事项 打印完成时，喷嘴和打印平台可能仍处于高温状态，建议冷却后再进行取模型操作！

打印完成后直接取出平台柔性钢板，弯折平台即可取下模型。二次打印时，请确保平台无残余丝料。

模型移除建议：

1. 请将平台板拿到设备外部再进行移除，否则模型碎屑容易留在设备腔体内，建议保持腔体清洁。
2. 建议使用刮刀取下TPU或其他柔性材料打印的模型，使用刮刀进行此操作将确保您可以从面板上剥离柔性模型，而不会对模型造成损坏。

第五章 打印辅助功能使用介绍

⚠ 注意事项 因固件会不定期升级，界面请以实际显示页面为准。

5.1 调平校准

首次开机引导会执行一次设备校准。后续使用过程中根据情况选择调平或振动补偿。

关于何时需执行调平的说明：

- ◆若是持续只打印PLA材料时，可以只执行一次自动调平，无需进行每次打印前调平，做一次调平有利于提升打印成功率。
- ◆若涉及打印材料类型的切换，例如从PLA材料切换到ABS材料打印，需要执行每次打印前调平。
- ◆若平台与喷嘴距离过远（粘附不住）或者过紧（丝料不吐出）时请执行自动调平。
- ◆更换新的打印平台板或者打印喷嘴后，需执行自动调平。

关于何时需执行振动补偿的说明：

- ◆打印模型振纹明显。
- ◆调节同步带松紧后。
- ◆设备长时间未使用，重新启用。

操作说明：

点击  -  进入调平校准页面，选择[调平]或[振动补偿]，点击[开始]按钮，设备将自动进行相应校准操作。（注意事项：校准开始前，请确保平台以及喷嘴尖端无异物残留。）

关于何时执行PID校准的说明:更换新喷嘴或发现喷嘴温度异常时可执行该校准。

5.2 其他功能设置

在设备信息界面中可开启或关闭声音、丝料检测功能以及进行固件升级。

丝料检测功能开启时，设备将会在打印中途丝料用完后停止打印。

- ◆ 在无线网络连接时，点击固件升级可查看当前版本以及检测是否有新固件版本，并进行在线固件升级。

打印机名称和设备位置：用户可自定义修改设备名称和位置。

第六章 维护

6.1 打印平台板使用建议

1. PEI 粉末喷涂板需要配合胶水使用，适合打印PLA/PETG/PLA-CF/PETG-CF/ABS/ASA；TPU 打印时无需涂抹胶水。该板子为设备标配。
2. PEI 膜贴板适合打印PLA/TPU可以不使用胶水，打印PETG 建议配合胶水使用。该板子可额外购买。
3. PC 贴纸平台板适合打印PC/ABS/ASA。该板子可额外购买。
4. 平台板涂胶水后可使用水清洗。
5. 平台板若沾染油污，可使用洗洁精清洗。
6. 平台板若长期使用后有较大形变，建议更换新的平台板。

6.2 喷嘴的使用建议

1. 建议一个喷嘴组件对应同类材料使用。尤其是纤维增强材料与PETG，不可与其他材料混用，若混用材料容易引起堵头，降低喷头使用寿命。
2. 使用同个喷嘴打印不同耗材，更换的耗材打印温度低于当前喷头内耗材的打印温度，需要使用更高温的设置来进行吐丝，进行内部丝料的清洗。
3. 需要更换的耗材打印温度高于当前喷头内耗材的打印温度，直接用新耗材进丝即可。
4. 清洗喷嘴内残余丝料，可多次进丝，或手动通针疏通挤出残留丝料。
5. 更换新的喷嘴组件后，请重新进行调平操作。

6.3 设备一般维护

1. 打印累计200小时，建议设备的导轨处涂抹润滑油。
2. 建议每300小时，更换一次过滤棉，或观察滤棉颜色，颜色较深时请更换。
3. 建议及时清理设备腔体内的耗材残渣。

第七章 Q&A

Q1. 喷嘴堵头怎么办？

- 方案1：点击进丝按钮，将喷嘴温度加热至所用耗材的打印温度，待加温完成，拔出导丝管，查看丝料是否弯折，丝料头部是否平整。若不是，剪平整后将导丝管与丝料装入喷头，再点击进丝查看。
- 方案2：方案1无改善，则使用通针通丝。
- 方案3：若使用通针通丝仍无法解决堵头问题，请更换喷嘴。

Q2. 如何更换喷嘴？

⚠ 注意事项 更换喷嘴前请先关机断电，请勿带电操作！

1. 拔出导丝管，剪断丝料。
2. 按压住左右扣，同时拔出喷嘴，沿喷嘴顶部剪平丝料。

3. 将新喷嘴插入喷头中，可听到“咔”卡扣位置变换声，确保喷嘴卡槽位与喷头下部齐平，完成喷嘴更换。

注：如始终无法准确对齐喷嘴位置，可在安装时按压卡扣或取下喷头前罩（用手抓住喷头前罩下方外拉并向上轻抬即可取下）查看位置。

喷头装配是否到位的判断如下：

1. 安装必须用力将喷嘴按压到底；
2. 检查是否安装到位：
 - a. 检查左右红色卡扣位置。

- b. 检查喷嘴卡槽位与喷头下部是否齐平（如视线有遮挡，可取下喷头前罩观察）。

4. 重新通电，点击进入进丝页面，根据屏幕提示完成进丝操作(见4.1.1)，丝料顺利吐出，即喷嘴更换成功。

Q3. 更换喷嘴后需要调平校准吗？

需要执行自动调平。喷头安装可能会产生微小误差，为保证打印质量，建议进行调平校准。设备每次打印前默认勾选调平操作。

Q4. 点击打印模型，喷头运动，但打印一开始就没有出丝怎么办？

1. 观察导丝管，确认丝料是否已进入喷头，若无，请再点击进丝按钮，直至丝料从喷头中吐出。
2. 查看喷头是否堵头，若是，解决方案请查看Q1。

Q5. 打印时发现喷嘴与平台相对位置过高（远离平台）或过低（顶到平台）怎么办？如何调平？

请先确认打印平台是否安装到位以及喷嘴上是否有过多残料，若存在以上问题请先处理上述问题，然后进入设置页面，选择调平选项，执行自动调平或开启打印前自动调平。

Q6. 可以使用其他品牌的丝料吗？

可以使用其他品牌丝料，但由于不同材料参数温度略有区别，需要经过参数调整配置。

Q7. 打印ABS材料安全吗？

ABS在加热过程中会释放有毒气体。如条件允许，建议将设备置放在开阔环境下打印。儿童活动场所建议打印PLA无毒材料。

Q8. 打印模型发生翘边或粘不牢现象怎么办？

方案1：增加平台温度可有效缓解此问题，高温可增加平台与模型的粘附力。

方案2：模型切片时选择添加帽檐（birm）可有效缓解此问题。

方案3：涂抹胶水。

方案4：清洗平台板，去除油污。

方案5：确认平台是否放平。可使用调平校准功能。

Q9. 插入U盘后找不到打印文件，屏幕显示全为文件夹怎么办？

U盘格式不正确，设备支持FAT32格式的文件系统，请将U盘格式化成FAT32格式。

Q10. Wi-Fi连接不上怎么办？

1. 请检查Wi-Fi名称是否含有特殊字符，如果有，请修改之后再次尝试。

2. 请检查密码是否含有特殊字符，如果有，请修改之后再次尝试。

Q11. 更新固件注意事项。

请不要在下载或更新固件时断电断网，防止更新失败。

Q12. 为什么开机屏幕白屏？

如果听到开机声音，请更换屏幕或者排线；否则请联系售后人员。
